History and Physics of
Superconductivity

Prof. Krishnendu Sengupta

Tuesday, April 10, 15:45-16:45, PF-AG-14

In this colloquium Prof. Krishnendu Sengupta from the Indian Association for the Cultivation of Sciences, Kolkata is going to present the key concepts which contributed to the understanding of the phenomenon of superconductivity after it was discovered by Onnes in 1911 in a pedagogical manner.

The talk will out-line the central experimental phenomena and theoretical understanding in this area as they were historically developed, present some anecdotes in this regard, and discuss some areas where these ideas can be useful in the near future.
