

TUESDAY COLLOQUIUM

"Observing a changing sky"

Dr. Greg Stachowski

*Department of Astronomy, Institute of Physics,
Pedagogical University of Krakow, Poland.*

Much of the recent progress in astronomy and astrophysics has come from the technology which enables us to observe the sky with increased temporal resolution, not just improved spatial resolution. I will present an overview of techniques and recent results from the perspective of an observational astronomer to show how both small and large telescopes can contribute to better understanding of astronomical objects at all scales.
